DETAILED ACTION

The RCE dated 8-25-06 is acknowledged.

Claims included in the prosecution are 37 and 43-44.

Upon consideration, the 112, first paragraph rejection is withdrawn.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 37 and 43-44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There should be a 'comma' between 'Seringe var' and 'Thunbergii' in claims 37 and 43.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 37 and 43-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thiele et al (5,939,535) in combination with Karmali (6,184,227) and Yamahara et

Application/Control Number: 10/010,154

Art Unit: 1615

al (Nature Medicines, 1995), JP 10046142 (both are of record), the last two references by themselves or together.

Thiele et al disclose that alcohol causes increase in the levels of lipid peroxidation, acetaldehyde and malondialdehye, which cause liver injury. According to Thiele et al, malondialdehye is formed by the peroxidation of polyunsaturated fatty acids and from the oxidative degradation of deoxyribose by a hydroxy free radical (col. 1, line 15 through col. 2, line 40). What is lacking in Thiele et al is the protection of the liver function from damage from excessive consumption of alcohol.

Karmali discloses that the administration of antioxidants inhibits the oxidation of ethanol and the toxic effects of acetaldehyde (col. 3, line 45 through col. 4, line 22).

Karmali however, does not teach the administration of ethanolic extracts of Hydrangea.

Yamahara et al disclose that the methanol extract of Hydrageae Dulcis Folium exhibits strong radical inhibiting effect and inhibitory effect on oxidation of lipids (page 2, lines 7-9 and Experiment on pages 2-6 of the English translation).

JP discloses extracts of Saxifrage stolonifera exhibit marked and potent antioxidant effect compared to conventional antioxidants (English abstract).

In essence the references of Thiele et al and Karmali show the increases in lipid peroxidation and the production of reactive aldehydes caused by ethanol consumption and the inhibitory effect of antioxidants on the lipid peroxidation and the production of reactive aldehydes. It would have been obvious to one of ordinary skill in the art to use the extracts of Hydrageae Dulcis Folium or Saxifrage in the teachings of Thiele et al and

Art Unit: 1615

Karmali to protect the liver function from alcohol since the references of Yamahara et al and JP teach the strong inhibitory action on the free radicals exhibited by these extracts.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gollamudi S. Kishore, Ph.D whose telephone number is (571) 272-0598. The examiner can normally be reached on 6:30 AM- 4 PM, alternate Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Woodward Michael can be reached on (571) 272-8373. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
